

CABLE MANAGEMENT FOR RACK MOUNTED COMPUTING SYSTEM

ABSTRACT OF THE DISCLOSURE

[0030] Systems and methods for cable management in rack-mounted computing
5 systems for housing electronics devices such as servers are disclosed. The cable
management system generally includes a cable management housing to substantially
enclose the cables therein. The housing defines openings to contain cables extending
therethrough, each opening having a first and a second portion each configured to contain
cables extending therethrough and a passage portion extending between the first and
10 second opening portions and configured to allow passing of at least one cable between
the first and second portions. The first and second portions may be disposed proximal
and distal to the electronics devices to allow the cables extending therethrough to be in
first or second cable position, respectively. While connected to the electronics devices,
the cables extend through the first portion and are in a first cable position. While
15 disconnected to the electronics devices, the cables extend through the second portion and
are in a second cable position.
